RELATIONS OF CEN/CHI WITE CITER CERMAN CRYPTOLOGIC BUREAUX

- 1. During his period of detention (September December 1946) at the Ho 7707 European Command Intelligence Center, Cherursel, Germany, Wilhelm FERNER, former Ministerialrat and chief of cryptunalysis in the Armed Forces High Command Cryptologic Agency (CKV/Chi), wrote a lengthy report concerning his past career and extensive experiences in the field of cryptology. This report was never issued in translation although an inadequate summary by Army Security Agency was issued as TICOM/I-206.
- 2. It is presently planned to issue a complete translation of the entire report in the DF series (DF-187). The attached translation is the fourth of the series and is FERRER's description of the relations of OKW/Chi with other German cryptologic bureaux.
  - 3. Previous TICOM reports in this series are:

DF 187 The Career of Wilhelm FERNER with Special Regard to His Activity is the Field of Cryptography and Cryptography

DF 187A Organization of the Cryptologic Agency of the Armed Forces High Command, with Names, Activities, and Number of Employees together with a Description of the Devices Used

DF 1878 The Cryptenelytic Successes of CKW/Chi after 1938

A

RELATIONS OF OKH/CHI WITH OTHER CERMAN CRIPTOLOGIC BUREAUX

#### A. Relations with CRM 4 SKL TII

The relations of OXN/Chi with this unit, known at Chi as "Maxine" ["Mavy"], were the oldest. That resulted from the fact that the Newy had carried on oryptamalytic work even during World War I, that the unit had its quarters in the former Havy office in Berlin on the Landwehrkanal, and that the workers of the "Navy" were so to speak commades of the other faculty. Nevertheless the collaboration was very loose. This was due to the fact that the "M" (used hereafter as abbreviation for the official designation ORM 4 SML III) worked with very few exceptions only on foreign naval messages. The exception was the work on those English Covernment plain codes which were used by the world ompire in traffic with its colonies. The consequences of this limitation to purely naval affairs was that all those things which might have led to the no dreaded inter-service frictions where there were like assignments were wanting and reither party could have disputed the other's claim to success without having to keep its own nuccess secret. So when Chi began early in the 20's preparing cryptanalytic reports (at first monthly, later quarterly down to but not including 1933), it was natural that "M" also received a copy of these reports. "M" did likewise. A ctudy of the reports showed, however, that they could be of no mutual assistance: the traffic worked on was too different. So the reports continued to be exchanged; otherwise the cooperation was limited to paying a personal call on the expert of the other faculty whenever there neemed something worth showing him and then telking things over. There might be no such discussions for months at a time and yet each one was confident that he "ame turn to a fellow worker of the other faculty if he thought it would be worth while. The delimitation of susignments also had the result that Chi automatically turned over to "N" fortisith any messages of foreign mavies which had erroneously been intercepted by its intercept stations while "M" did

<sup>1.</sup> Oberkommando der Marine 4 Seekriegsleitung (designation for the Havy High Command Cryptologic Bureau).

10 mg 1

Cipher Devices was set up with Government Councillor (Registrungarat) Dr.

HUEITEMBAIN as chairman, "N" was caturally also represented. Whenever there
was a change of director in thi or "N" the old and new directors or chiefs
paid a farswell call and an initial call but there was no regular contact
between these persons. I met as Director of "N": Kapitaenlautment

KISERTIZKI (Shortly after World War I), then Kapitaenlautment MOESSEL, and
shortly before the outbreak of the war a Kapitaen R..., whose mane I do not
recall but do remember that he had once thrown himself over an explicitly hand
grenade in order to prevent disaster and home marks of severe wounds. Of the
people who occasionally came to call on my associates and were visited by me
or my associates the following are known to me: Superior Covernment Councillor
(Oberregistrungerat) TRANOW and Superior Covernment Councillor (Oberregistrungerat)
FRANKE. The latter became limison official of "M" with the chi shortly before the
collapse and at the end was interpreter with an American staff in Werfen.

#### B. Relactors with OKI. Chistelle2

Force set about organizing a cryptanalytic section of its own, where were offil some interpreters of the Air Force in training with Chi. On the basis of my experience, I had intended to continue this training for about two years but I was forced to give up this personnel at once. Without being able to fix the date I think it was in 1957. So the Air Force cryptanalytic section began its work with the meager knowledge and experience obtained at Chi. As far as became known to me, work was done primarily on such Soviet Russian radio traffic as could be regarded both as Army radiogram and as Air Force radiogram. Since, in the course of the work, unforeseen difficulties kept cropping up, one of the course of the work, unforeseen difficulties kept cropping up, one of the course of the work, unforeseen the course of the sork. The Chi to get advice. From this there developed an attachment which continued in the future. As often as the Air Force

<sup>2.</sup> Oberkommando der Luftwaffe, Chiffrierstelle (designation for the Air Force High Command, Cryptologic Bureau).

cryptanalytic section was in need of help, won LIMEN came, but in the name way this could always call up LIMEN if it wanted to know whether he had made any progress or when this needed material which it assumed the Air Force cryptanalytic section must have. Although, strictly speaking, the work at this and at the Air Force ran parallel, there never arose any conflicts as to competence; on the contrary, in case of need there was open collaboration for the purpose of helping to obtain reliable intelligence results as quickly as possible. Who the directors of the Air Force cryptanalytic unit were I cannot toll today. Known to me were the workers won LIMSEN, Majer KUPFEER (formerly employed at thi). I met a number of other nambers of the Air Force cryptanalytic unit but their names have escaped me, all the more since I had direct contact personally only with you LIMSEN.

#### C. Relations with OKE/In 7/VI3

The setting up of a separate Army cryotenalytic section against my will and against the will of General FELIGHEET by desire of General won BRAUCHTISCH was under an unlucky ster. Adequately trained personnel could be found only at Chi but this personnel was not numerically adequate to set up a modern supptanalytic section. The order to do so was given in 1938, if I recall axight, and led to a division of Chi. Sisce a cryptanalytic unit carrot exist by itself alone but requires an extensive intercept organization, my staff of cryptanalysts was almost unaffected by loss of personnel. Other parts of Chi had to turn over a good meny persons. In particular some intercept stations which had hitherto worked for Chi were now attached organizationally to OKH. I assume today that In 7, which had long entertaised the idea of giving the Army a cryptanalytic section of its ove, had propered the necessary cryptanalytic personnel without the ----began practical operation with the assistance of some cryptanalytic assitants from the intercept stations. The first director of the Army High Command Cryptologic Bureau (OKH-Chiffrierstalls)

<sup>3.</sup> Oberkommando des Hesres, Inspektion 7/VI (designation for the Army High Command Cryptologic Bursau).

Total All

was Captain wer MONSHIEMY (captured by the Russians at Stalingrad), who came from Chi. The attempt made repeatedly by Chi to establish a working contact with the paople in the Army cryptanalytic section had no success. This may have been due to the first director of the Army cryptarmlytic unit, Captain MMMG, or he may have had instructions to this effect from his superior, Liquidenant Colonel MASSEL, - I never did learn the true recorns for such an attitude - at least no sensible rational collaboration resulted. Instead Chi une forbidden to continue deciphering systems of foreign armies. I have already mentioned elsewhere that this activity was nevertheless continued under me because to my mind the Army cryptamalytic section could not successfully handle certain problems alone. When Captain Dr. JUNG became director of Army cryptanalysis at the Army cryptologic bureau (Heereschiffrierstelle) the tension was eased and while Major Baron OSTEM-SACKEM headed this unit during the war I area made available the Soriet Army systems colved by my essections, allowed my people to be detailed to ONH and allowed them to extend overy contrivable aid. OSDEW-SACTED put a bullet through his head after 20 July 1944 because he was under evaptoion of having been involved in the events of that day. When the detail of my recole empired (autumn 1942),5 the contact was also broken off, without any personal feetings to be sure. The suscessor of Lieuterant Colorel Baron CSWEN-SACKER was Lieuterant Colonel AWDRAE who, shorely before the outbreak of the war, was imagefermed from the cryptologic saction for sarvice as the front. Another member of thi CKH was Government Councillor (Regierungerat) Baron ENCELHARDS who had originally been an employee of the Cryptologic Bureau of the Ministry of Wor (Chi RM), also the official BLCCK who had likewise belonged earlier to the Cryptologic Burson of the Ministry of War. The waxes of other members of this unit are to longer familiar to ma.

<sup>4.</sup> It had changed its came several times.

<sup>5.</sup> Autumn 1944? (Editor's note).

#### D. Relations with the Foreign Office (Austrartige Aut)

The cryptacalytic bureau of the Foreign Office developed out of the cryptanalytic sarrice of Grand Headquartors of World War I. The director of the Oryptologic Bureau of the Foreign Office, later Ambassador of the First Rack (Gescharged as captain in the signal troops and had been token over by the Foreign Office. The melations of this with the Foreign Office were straiged during the first half of the twenties in spite of outwordly correct behavior. I have already stated elsewhere that the Foreign Office took the point of viss that the Armad Forces should not concern thempolyon with the orgptographic system of foreign governments. This was a plata ricellange on the port of the Foreign Office and with any such artitude any carmon work on the systems of foreign governments was saturally out of the quession. Of course, Chi saw through the negative abbicude of the than Covernmeet Councillor (Regionucgonat) SELCHOH: in order to preserve the bureauerable point of ster so contously maintained in official life and in order a priori to rake any author were his impossible. SHOROR was operating with the thesis that the Armed Street were interfering in the field of the Foreign Office. SELCHON may have here clever enough to realize that who opinion he expressed was merely a signboard; in reality he declined to cooperate because he was afraid he would have so give Cal more than he would get from it. This standpoint was comprehensible enough but wer objectively false because at that where this was already reading Maghiah, American, Italian, and Franch state telegrams and could have been of real use, all the some so since thi was constantly improving its intercept work. However, thi made no use of the fact that the true reason for SMICHOW's adverse answer was known and instead put up other ergaments which secured a very atrong position for the end were of decisive importance whomever the question or the conto craim or the Armed Perses to the cryptanalysic of foreign government systems was raised in military circles:

1. If this is repreached with having exceeded its competence when it decrypts foreign diplomatic messages, then the Armed Forces requests the Foreign Office to make excilable to it all deciphered diplomatic messages in which military matters are touched upon.

#### \_\_TOP-SECRET

- 2. If the Foreign Office should refuse this request, then the point could be discussed, if necessary, whether the Foreign Office would be ready to pass on at least the contents of such messages. In this connection it must not be forgotten that the soldier and the diplomat, due to their fields of work, the easignments set for them, and the responsibility which each of them must bear, will evaluate and utilize the content of a message very differently in many cases. (This actually correct assertion served as a basis for characterizing as inadequate a possible offer of the Foreign Office to give thi the content of telegrams).
- 3. If one demands of Chi, and that is the sole justification for its existence, that in case of a future war it shall successfully work on the cryptographic systems of foreign Armed Forces, then it is foolish to demand that Chi shall be allowed to work only on the relatively primitive Army systems of the present time in preparation for such a task, the complexity of which no human being can foretell. It would be impossible to foresee whether in the future in the traffic of the higher staffs cryptographic systems might not appear which in their structure belong to the type of the diplomatic systems. Therefore merely for training purposes Chi could not be content with working solely on the systems of foreign armies.

Chi was perfectly well aware that none of these arguments would be strong enough to induce the Foreign Office to collaborate. The arguments were intended rather as a defense in case the Foreign Office should undertake official stops to take diplomatic cryptanalysis away from Chi. In the discussion which might then be expected Chi would have advanced a further argument:

concern himself with cryptanalysis: his position before the international public makes it essential that he avoid every ticklish source of information; a knowledge of the contents of decrypted foreign cryptograms is much more likely to bring the diplomat under suspicion of having relations with a "Black Chamber" than it is the soldier, whose broad back can sustain a

hearier load and who can, in case of need, attribute his acquaintence with the secrets of fereign countries to his good intelligence service. To back up this sound view the case of Hungary was cited where cryptanallytic work was exclusively in the hands of military persons.

It did not come to an open conflict, however, between the Wilhelmstragge and Chi. For Chi had meanwhile improved its reception and was already intercapting thousands of diplomatic radiograms which were offered to the Foreign Office. SMICHOW perceived the advantage of such a connection with Chi because his cryptanalytic section could only rely on the material which the main telegraph office placed at its disposition. Consequently the increased opportunities afforded by the intercepts from Chi were definitely worth considering. So SELCEUM accepted the offer and from this moment on there was no longer any fear of measures being taken by the Foreign Office which would be prejudicial to the work of Chi. Sensuhat later SELCHON was informed, without any suggestion that he treat the matter confidentially, that Chi was reading the Polish diplomatic systems. Then he charged his tactics and himself sought a competition, even though he did this merely on the pretent of desiring common orientation. The form chosen by SELCHOW was not essential to Chi: once SELCHOW permitted the experts here and there to talk over and solve problems, it was natural that such discussion would lead to lasting collaboration as soon as there was no question about mutual edvantage. And since Chi always had a livelier working tempo and had been very fortunate in the selection of its cryptanalysts, Chi was sometimes able to offer far more than it received from the Foreign Office. In this connection it was the principle of the cryptanelytic unit, which I represented, not to indulge in keeping a petty account showing what each party contributed but rather to keep in view the interests of the whole: mutual unreserved furtherance of the work in order to

be adequate for the demands of the times and able to divide up different fields if occasion required, to exchange personnel, and to adapt itself to the conditions as they arose. In the period which followed this spirit characterized the relation between Chi and the Foreign Office: personal differences which arons could not affect the very close collaboration. Traffic which was requested was exchanged

without reserve, likewise code groups and rescripherments; every special discovery was brought to the attention of the other units; in order to expedite the work, the headling of Turkich messages, for instance, was in the quarters of the Foreign Office and the appropriate personnel from Chi were detailed there while the Foreign Office turned over some employees to Chi. And when, due to nuccess. ful air attacks on Berlin, Chi could no longer house its personnel in its can rooms and my can office had gone up in flames, the Foreign Office provided appearly aid. An agreement was reached with the Foreign Office to maintain this connection without fail in case of an evacuation of Berlin, even a combining of the two organizations in a common emergency shelter was planeed for and only the technical impossibility of carrying out such a plan in April 1945, because the alternative quarters (Halle/Salle) were already overfilled, separated the fate of the cryptanalytic sections of the Foreign Office and of Chi.

Known to me from the cryptologic bureau of the Foreign Office were:

SELCHCH, Generator I. Klasse, Hauptmann, a.D.

PASCHKE, Adolf, Oberregierungerat, general cryptopolysis, Aucsia, Italy.

Dr. SCHAUFFLER, Oberregierungsreit, analyst.

Dr. MUNZE, Regierungerat (?), spalyat.

ZASTROW, Angestellter, England, America.

Dr. (?) LANGLOTZ, Regierungerat (?), can systems, supposedly dead.

Dr. KRKG, Analyst, belonged to the war personnel, astronomer in civilian life.

CASFER, KASPER (?), Angestallter (?), Roumania.

M. Relations with the Forseburgeent des Reichsluftfehriministeriums

At the time of the founding of the Ferschungsant (FA) which as an agency of the Prussian Prima Minister Markano Courted was a state and not a patienal agency, the actual leaders of this organization were the former Kapitaenleutrant SCHEMPF and the former employee of the Cryptologic Bureau Captain (motired) (Hemptmanu a.D.) SUHAPPER. Both were well swave of the former tension between the Foreign Office and Chi; therefore both of them knew how dangerous it is for the welfare of an egency if it can be proven that it has exceeded its authority. In such cases any parvoy point of view become a well entablished legal claim to defence against those who, so to speak, were taking away one's daily broad? In the spring of 1933 Chi had seen the above-wentioned officers and employees transferred to the FA, not without regrot. Professional doubts were immediately raised when word got around that the FA intended to set up a oryptanalytic unit. Personal friction could not fail to develop when the FA through the former members of Chi, SCHIMPF and SCHAPPER, declared that Chi was not competent to work on foreign diplomatic messages because HTTLER had selected the FA alone for this work. It was quite natural that the organizations of Chi, who aside from myself were all amployees, regarded with concern the possibility of a dissolution of the unit. There was a repetition of what had happened years before when the Fereign Office tried to deny to Chi the right to decipher foreign diplomatic messages, whereby the FA likewise made the same mistake and would not obligate Itealf to make known to the Ministry of Defense at least the content of weasuges deciphered in the FA. The FA also overestimated its plemipotentiary powers in enother respect. Actually, in spite of the weighty influence of Hermann CORRERO, there were slight: how could an agency of a state, Prussia, pronume to lay down the law to the Ministry of Defense? And if HITLER as as imperfectly oriented Charcellor did give the FA eleme the order to crypumum, --, it does not follow at all that he has any right to take away from the Ministry of Defense (Chi) the right to cryptanalyze since the Chancellor cannot give such

<sup>6.</sup> Research Bureau of the German Air Ministry (designation of the signal intelligence agency founded by COERTING).

and other statements

orders to a unit of the Ministry of Defense! In the Ministry of Defense we had absolutely no idea of submitting to the ill-founded winhes of the FA, all the more so since the Foreign Office felt little desire to replace its timetested partner, Chi, with the extremely dubicus partner, FA. It was also quite conceivable that the FA would have demanded the dissolution of the Cryptologic Bureau of the Foreign Office if Chi had complied with the demands of the FA for the censation of itn cryptanalytic work. As yet the FA had no radio intercept nervice of its own, consequently the Foreign Office remained dependent on Chi for radio traffic. To take the cryptanalytic work away from Chi hut to suffer it to intercept foreign diplomatic radiograms was a contradiction per eet There was a lot of talking and threatening, but the only concession that was made to the FA was the release by Chi of those people who expressed the free wish to leave Chi and go to the FA. FELLGIEBEL and I had agreed on this so as not to have people in our own unit who were trying as hard as they could to go to GOERIEG. Thus the FA was forced to organize and to carry on its cryptamalytic work with far less trained personnel than it had assumed. Development procoeded but slowly, therefore, in spite of all that GOERLEG did to promote it, in spite of large nums of mousy, and in spite of the hiring of many people when I employed 40 persons in the cryptanalytic section the FA had engaged 60 in a like section. This did not run counter to the vishee of Chi because during these menths SELCHON thought it tactically correct to be reticent in respect to Chi and to cooperate loyally with the FA. How close this contact between FA and the Foreign Office was I never knew. I was only interested in the estensible successes of the FA which supposedly received from the Foreign Office all that it needed in the way of epiritual equipment, - all of which, however, did not prevent the Foreign Office (SELCEON) from inquiring confidentially from time to time as to the etate of the cryptanalytic work at Chi and from nending his associates to me to copy French code groups, the solution of a Serbian eyetem, and Roumanian reencipherments. From such visite, which were rero at first but later became more frequent, deductions could be made as to the accomplishment of the FA. However, there was no dearth of attempts on the part of the FA to reestablish contect with the cryptanalytic eection of

Chi, with a more or less tacit acceptance of the incompetence of Chi. The project failed due to the prerequisite for any such community efforts: the FA had asserted itself as an additional link in the procurement of cablegrams and taken over the duty hitherto performed by the main telegraph office directly, namely supplying the Foreign Office and Chi with copies of cablegrams. Thus the channel had not merely become longer but the FA also exercised a censorship inasmuch as it was proven that FA claimed not to have received certain cablegrams whereas the Foreign Office had received them from FA. In the second place, the personal attitude of some people in the FA toward me had resulted in such obvious efforts to have me relieved of my office (unfounded accusation of Jewish encestry, later an unfounded accusation of baving spoken libelously of BLCMMERG and GOERING, tapping my telephone in the Ministry of Defense, maintaining an agent, (a spy) in my own office), so that I should not have been able to decide to cooperate unless the FA had made emends for all the injustice done me. Since this did not happen, everything remained as it was: the FA gave its cablegrams and radiograms, Chi turned over its radio traffic; but there was no exchange of code groups or reencipherments, and even though there were no more open conflicts, neverthaless the FA still remained an agency hostile to the Armed Forces, a situation which did not change when its founders left Prussian service and became officiale of the Armed Forces in the Air Force, 1. e., Military persons. The bad reputation of the Forschungsamt as a private organization for which there was no logical need and which merely served the vanity and ambition of Hermann GOERIKG, an organization headed by people who can set more store by their personal advantage than by the patrioticm they were always talking about, not only remained bad in military circles for 12 years but when, after the 20th of July 1944, the final attempt was made to coordinate the approductive duplication in the field of cryptanalysis and I was given the commission of waking preliminary studies looking toward the creation of a national cryptanalytic agency, even the SS-General (SS-Obergruppenfuchrer) SCHELLENBERG 7 was of the opinion that the FA must vanish without a trace because

<sup>7.</sup> After 20.7.44 became Chief of Counterintelligence (Abwehrchef) within the framework of the Militarisches Amt.

it had become nothing more than the "private plaything of Sermon COERING" to quote SCHELLERDERG's can words.

#### F. Additional Remarks on the Forschungsemt

In spite of the dislike of Chi and the Foreign Office for the Forechungsamt it is possible that this organization had good success in many, possibly in very many, fields of cryptanalytic work. Thus the entire Slavic Sention is supposed to have rated very high. I myself could never get this impression since otherwise the Foreign Office would not have found it nemessary to turn over to the FA a Yugoslav system contrary to the agreement made with Chi. I rather had the impression that the great personal successes of SELFERT, SCHAPPER, SCHROSEER. etc., had rendered these people spiritually unfruitful. Returnily the FA was also represented in the Commission for Testing Devices (Chairman: Regierangement Dr. HUEFFENHAIN of my woit), but the representative of the FA turned out to be an absolute layran ake lacked even the most elementary concepts of a medern cryptographic device: If that was the expert of the ruch tooted Forechungsent, than apthing could be expected of its less expert members. I have often had in By hard the results of decryption at the FA: their value was problematic! For, corresponding to the deeps mantle of mystery in which the TA ecrelaged itself from the beginning, the decrypted messages were so secret that they were never put out in the form of a sensible translation but wars given only as summaries. This was in direct opposition to the policy of the Foreiga Office and Chi which was to translate as conscientiously as possible since to the Foreign Office a decrypted message was a "document", and to Chi it was a "report". The decrypted massages of the FA were neither the one thing nor the other but a piece of information of questionable objectivity. The accesquence of this was that inexactitudes appeared which occasionally caused even HITTLE to inquire of the

I got the impression that, despite the favor it enjoyed in a material way and in spite of really competent workers, the FA was lacking in sober objectivity: the empire building mania of the chief had affected his associates and those less affected did not realize they were making themselves ridiculous. I know the FA was committee represented for upsetting the work of the German counter-intelligence service. I have no reason to assume that this assertion was not

**海洋** 

correct. For it was the fate of the FA to meddle with some service or other which was plready in existence and which then had to be abolished if possible and turned over to the FA - so that it might have a reason for existing! Thus is the history of Notional Socialism the FA will merely play the role of the mischievour, spoiled child which is careeed by its father and partly feared, partly ridicaled and despised by its commades and merely owes its existence to a foolish father. Or, opeaking periously, the FA is a phenomenon of degeneration: o etateeman reeds confidential reports for hie information; to get these he does not make use of the already existing organizations, does not take the time to test their ability to produce what he wante, but rejects them unseen in order to set up for himself alone, as the center of all his actions, an intelligence apparatus which in its extent might have natisfied the needs of a great power; he likes to term himself the "ronking officer" of the German Armed Porces but with his pet organization he upsets the circles of the Armed Forces; not knowing what to do himself, he allows himself to be advised. by people of weak character and finds satinfaction in a hursaucratic monstresity, as if in this way he were juntified and got revenge for some earlier personal elight; there is no thinking for himself, no honest criticism, no sense of reality, because he concentrates solely on material things, specifically comfort and luxury; there is no knowledge of himself, - and that is the sickly thing about it all, - the gigantic apparatus gives the appearance of an all embracing epirit and the lord of thousands of secrets believes he had found tho philosopher's stone. The FA was supposed to be a nort of epiritual Aladdin's Lamp (Tischlein-deck-Dioh), ever ready when some wise information is needed in order to rake no political mistakes; o kind of dead sure rule for always winning at the political Roulotte wheel. If such a concept of the art of governing had

this goal were already painful, for there is nothing so obnoxious as coquettish uglinees and ealf-eatiefied spiritual insignificance. Thus I never heard that the FA completed any performance calling for mental effort. At the beginning of ite activity the members received money presents from GOERING whenever a primitive cryptographic system had been solved. That had a ridiculous effect.

In the offices of the FA were to be found all the latest technical devices, worthy of an enterprise aiming at substantial and productive work. These office wonders they liked to show to friendly persons without any realization of the fact that reveling in such office luxury and beauting about the taick carpets had nothing to do with the matter in hand nor with people who claimed to love their country more than other ordinary mortals. There was a clever system of guards and controls, duly recorded caths of secrecy, clock time stamps, and motorized messengers, all of them things to which there is no objection if they have any sense and purpose. But there everyone to whom the mysteries of the FA were shown got the impression that there was no content to go with the technical form. That sterling quality which would have given the Prussian Prime Minister a moral right to organize such a huge intelligence service was wanting, since one was no longer obligated to be rather than to seem to be, instead one projected himself into this illusory world and considered it to be one of a precious reality.

- G. Persons Who Transferred from Chi to the Forschungsemt
  Those persons who went from Chi to the Forschungsemt (FA) were:
- 1. Lt Captain (Kapitsenleurmant) SCHREF
- 2. Emil Baron (Freiherr) von REZWIJEK, Employee (Angestellter)
- 3. Captain (Hauptmann) Walter SELFERY
- 4. Carl MARCHTER, Employer
- 5. Studionassousor Mortin FAETZEL, Employee
- 6. Alois (?) WENZEL, Employee
- 7. Friedrich (?) SCHAPPER, Employee
- 8. Max BORTIGER, Employee
- 9. Fraculein GLAESER, Employee

SCHIMPF was an officer on active duty and deputy of the then Director of Chi, Hauptmann (Captain) OSCHMANN, who fell in the West as Major General (Generalleutrant).

Von REZNICEK was analyst for Italy in my unit.

Secusion

SETTERT was the immediate superior of S.MAPPER and directed the intercept service, evaluation, and thus the procurement of telegrams including all pertinent questions of the service incofer as cryptannlysis was not conserved.

WAECETER was decipherer for English but mlso helped with enalytic problems, in my unit.

PARTZEL was decipherer for French in my unit.

WENZEL was decipherer for Polish in my unit.

SCHAPPER was head of a small section 8 which was to work on improvement of our own reception, e. g., selection of suitable sites for the erection of new intercept nutations, procurement of building plane, apparatus, and equipment. He had been active after the First World War had been lost as Captain, Sid., in the cipher section as a not highly paid employee, he was surely very zealous and probably quite capable no that the role of n minor employee undoubtedly did not suit him. Thus it may have happened that in his memory he had become "Chef" and at least felt better with that recollection.

BOETIGER was decipherer for French and, as far as I know, was soon passed on by the Forschungsamt to RISBUNTROP'n Bureau. In my unit.

GLAESER was statistical clerk and assistant to WARCHTER. In my unit.

SCHROEVER developed own cryptographic eyetems when necessary, made analytic netudies, e.g., of the Army Enigma, and helped anywhere in the analytic section where an industrious man who knew no languages was needed. In my unit.

H. Remarks on the Supposed "Incompetence" of Chi

The many political crises in Germany and the sometimes strongly emphasized national factor in HITLER's speeches had naturally made a lasting impression on many civilians in the Ministry of Defense. Commades of like wind banded together often good patriots — and formed small circles of people who so longer found the

<sup>8.</sup> When asked whether SCHAPPER was "Chaf" of a maction, Fine replied:

<sup>&</sup>quot;Friedrich SCHAPFER was never "Chef" of a section. I have stated elsewhere that to have a "Chef" there must be an "Abteilung". Now at that time the entire cipher section was still a "Group", i. e., at its head stood not a "Chef" but only a "Leiter". So when the entire outfit was not even an "Abteilung", a part of it could certainly not be an "Abteilung". Hence SCHAPPER was not Chef."

fruitless speaches in the Reichstag significant, who also regarded HULLWELLS a German national policy as too irresolute and unpromising, and regarded HITLER as the true savior of Germany. In Chi, too, such a circle was formed. At first these people remained good comrades; they thought and felt patriotically and did their duty no less well than other people. Late in 1932 these people becare more radical. At first cautiously, then more openly, they abandoned their reserve, talked politics even during working hours, took up collections during working hours for any SA-men who had come to grief, emoked Farty cigarettes, and very likely secretly joiced the SA (Sturmabteilungen - Storm Troope) or the SS (Schutzstaffel - Protective Guard). Such a circle of enthusiastic but unfortunately unrestrained people had also been formed in Chi: they stood up for their idea, they also "fought" for it, but unfortunately they did not raise the question whether this fight was being carried on by proper means. Occasionally there was friction: with all due respect for the views of other people, I had to ask them not to take up a collection when on duty because that was forbidden; not to come to work wearing the Party emblem because that was forbidden; I was obliged to report it if one failed to come to work simply because be thought it more important to take part in a Jew raid. The reliability of some of these people decreased; they went to the casino /snack har/ more frequently then necessary, ostensibly to drink coffee but in reality to talk politics with one another in more agreeable eurroundings. To such a circle the above-mentioned persons at Chi belonged with the exception of SCHIMPF, WAECHTER, PAETZEL, GLAESER, and SCHRCEDER, who were much in sympathy with this circle but did not misuse their working time. Aside from political cares these people also had their private worries. SCHIMPF along with a very ironical tongue had an inferiority complex. He was suffering from the idea that he would not be able .\_\_ 10 REZNICEK, an to fill successfully +>

<sup>9.</sup> Alfred HUCENBERG was a member of the Reichstag from 1920-1933; chairman of the German National People's Party 1928-1933 and was Minister of National Economy, Food, and Agriculture in HITLER's cabinet, 1933. He retired in the same year and bis party, the "Green Shirts" was dissolved by HITLER in 1933. Æditor's note7.

Carl Serve

extremely able cryptanalyst with an undeniable genius, was a radical and was personally discontented because I was Government Councillor (Regierungerat) and he was not. So he was worried because he was not in line for a pension. SEIFERT was an officer on active duty, with an assured future, to be sure, but he had gotten the political bug and he thought that because of his wound he was regarded as physically unfit, so that he, as the son of an official (Beanter) was trying with all his might to become an official (Beanter). This striving was greater than his otherwise good cense and his recognized gifts and abilities. WAECHTER, despite all his skill as cryptanalyst, was primarily interested in becoming an official of relatively high grade (boeherer Beamter) without having fulfilled even one of the requirements. PARTZEL was generally prudent but he shared with the others the concern about provision for his old age. WENZEL had no ideas of his own but he had unparalleled patience and could pursue a task with incredible persistence; he was an opportunist. SCHAPPER was at heart one of the most discontented: the idea of having to work all his life as an employed (Argestellter) in a more or less subordinate poettion meds him especially impatient. BOETRUER, who had only mediocre ability but did have the rest social form, had connections and knew how to keep silent about them until the moment came which brought him success. SCHROEDER was an idealist. Badly wounded in the World War, he suffered greatly because of Germany's impotence - and found his way into the Party. He made overy sacrifice and gave all he had to help anybody who was in need.

In the eyes of the section REXNICEX was the leader of this circle. But behind the scenes SCHIMPF was working all the wore intensively. It was said of him that as a precautionary measure he was secretly paying membership dues not only to the MSDAP but also to the Communist Party in Germany. He was ambitious! The inquiries of these male employees to when they would be raised to the class of officials grow ever more urgent. None of them would comprehend that OSCHMANN and I not only had very little influence to push through such as appointment nor that the troubled times were especially unsuited for putting through reforms which would require the approval of at least two state ministers. The relations within the unit were becoming more acute while apparently SCHIMPF was attempting to make contact with GCERING.

30 Jacuary 1933 brought the "Vistory of National Socialism". Personnel in government service were allowed to near Farty insignia, to enter the SA and SS, and everything that had been forbidden a few weeks before was now to be promoted in all possible ways. Then one cay in the sorty enring of 1933 GORRING called up the Ministry of Defense to set that he wanted to talk with SCHEAPF. That was permitted - and about the middle of April 1093 SCHIMPF surprised the Cryptologic Bureau by saying he was going to take off his "Coat", i. e., his uniform, to become an official with Hermann (JOER)NG. I heard later that COERING had called SCHEMPF because someone had recommended him so an expert in the secret intelligence service. He, GOIRING, knew that SCHIMICHER (Minister of War, but at that time still (bief of the Ministrialant in Ministry of Defense) had only been so well informed at all times because he got his information from especially reliable sources. That was the great moment for SCHIMPF to roveal bluself and to hold cut in prospect to GOERING an organization which would supply no less valuable information. to GCERING pushed SCHIMPF; he resigned from the Newy and became Ministerial Povernmental Councillor (Ministerialret) in a few weeks. But even on the may to this success he remembered his friends and his "fellow fighters": . . placed nothing less than to take away from Chi, under the pressure of the already great authority of Hermann GOERING, the right to decrypt so-called diplomatic messages and to attract to himself the entire personnel, naturally without me and Dr. MUELLER. In his magnanimity he was not interested in Army cryptardysis. However in the matter of personnel this was so intimately tied up with the so-called diplomatic cryptanalysis that neither the Inspector of Signal Troops (Inspekteur der Nachrichtentruppen) (FELIGIEBEL) for the Chief of Counterintelligence (Abwebrohef) could accept this demand. Now ECHEMPF brought up his heavy gune. He claimed his new office, the FA, was the only agencpolitical communications. However, the National Defance (Raichswehr) was not impressed, for HITLER could not under any circumstances take from the Foreign Office its right to diplomatic exptanalysis, for he would have been circum. scribing each of his department ministers in his sphere of activity; on the other hand, that same HITLER was considered a promoter of the Armed Forceus and

finally the diplomate of that era were in the habit of including military information in their reports so often that any trimming of the interests of the Branch, Fereign Armies (Attache Group) (Abteilung Frende Heere (Attache gruppe) could not be tolerated officially, all the more so since neither the Foreign Office nor the FA would obligate itself to place at the disposition of the Armed Forces the messages decrypted in their cryptanalytic units. Now if the FA had actually been, as SCHIMPF maintained, the only authorized cryptanalytic agency, then Hermann GCERING could at least have put an end to the work of the Cryptologic Bureau by a etroke of the pen. Instead of that, the FA had to contont itself with attracting from Chi those people who were ready to go voluntarily. Add now all those people went voluntarily who had belonged to the same discontented group. They really had a bad conscience because the three former on active duty officers (SUHRCEDER, REZNICEK, SCHAPPER) had been told often enough by me that it was not decent to quit at a time when one ought to be especially loyal to the Armed Forces. So these men and the othere who were allowed to depart voluntarily without any attempt to lighten the burden of a bad conscience had to have something to nugar-coat their disloyalty. And for this they used the fairy tale of incompetence. Despite this incompetence the cryptanalysis of the messages of foreign governments not only remained in the hands of Chi, but the FA, which had demanded for itself the primary procurement of all cablegrams, was even forced to obligate itself to supply copies or duplicates of the encrypted messages to the incompetent Cryptologic Bureau of the Ministry of Defense. GCERING really should not have found it becossary to turn over such copies of telegrame to an incompotent agency. Thus the talk about the incompetence is proven to he a fairy tale. On the other hand, it may be trun that HITLER in ignerance of the true circumstances did charge Hermann GOERING as the top figure in the FA with

those intelligence items which can he obtained by technical means but even then SCHEMPF - under the wing of Minister GCERING - had overshot the mark. For it was impossible to build up a single organization so that it would satisfy all the requirements of the Armed Forces and of the Foreign Office. And so even the procurement of Army radiograms remained in the hands of Chi; the Navy also

acted independently in the procurement of its material, and, looked at in a clear light the FA was nothing more than a new cryptanalytic unit of the Prussian Prime Miniater who did not need any such service. A gigantic apparatus with supposedly far over 1,000 people was set up to provide Herr GOERING with those bits of information which had supposedly made von SCHLEICHER such a well oriented man. However, the fortures of the people who went to the FA with SCHIMPF were assured: SCHIMPF very soon became Ministerial Government Councillor (Ministerialrat), but wound up his career even more quickly by suicide; the others soon became officials (Beamte). Shortly before the collapse, the former hopeless members of the Cryptologic Bureau, SCHAPPER, SEIFERT, 11 SCHROEDER became Ministerial Directors (Ministerialdirigenten) of the Air Ministry, hence no longer Pruseian officials but officials of the Armed Forces with the rank of general. The call of the fatherland was the voice of a man with a fat purse. If we examine the fate of Hermann COERING, we are justified in doubting whether he received from his "COMPETENT" Forschungcamt the information becessary for his well-being. This so competent gigentic organization really never did fulfill its true purpose. So it was merely an example of inflated vanity and the limitless intoxication of power. However, it would be naive, to say the least, if we were to excuse the beneficiary of such a want of character by eaying that the Ministry of Defense had not been competent. If the FA as later organ of the Air Ministry had desiphered the messages of foreign air forces, then from an organizational standpoint everything would have been in order, but that is precisely what the FA did not do; can it be that it considered itself incompetent for the task? Old wives tales do not become truth merely by repeating them over and over again.

<sup>11.</sup> He quit as officer on active duty and "Hauptmann im Beichswehrministerium" to go to GOERING.

#### I. Concluding Remarks

No other German cryptamalytic units are known to me. It is conceivable that the Criminal Investigation Police (Kriminalpolizei) made attempts at cryptamalysis. As a rule, however, cryptograms (Kassiber) were sent to Chi. After the annexation of Austria, I was told that Andreas FIGL (cryptamalysis, ballhausplatz) a retired Colonel and Government Councillor (Regierungsmat) turned up in Berlin and supposedly was active with the Criminal Investigation Police. FIGL did not pay a visit to his old commades at Chi and I did not see him. In many circles he enjoyed a great reputation. Hence, it is possible that he was employed by the Criminal Investigation Police but I know cothing of interest.

<sup>12.</sup> FENNER states elsewhere that he was not aware that the Waffen-SS (Armed Protective Guard) made any attempt at cryptanalysis. According to him when the Forschungsamt was founded, its members constituted a special SS-formation. All members of the FA were members of the SS and were given promotions in it. /Editor's note7.
